SPRINTURF®

MADE IN AMERICA
FOR THE GREAT AMERICAN PASTIME

GrandSlam Extreme™ & GrandSlam Extreme Green™

SYNTHETIC TURF SYSTEMS FOR BASEBALL SPECIFIC PROJECTS

Sprinturf's GrandSlam Extreme™ and GrandSlam Extreme Green™ are ideal for the sport of Baseball. The dense low-pile surface ensures predictable ball bounce and ball roll while delivering the aesthetics of the most meticulously maintained grass surface. Exclusively made in-house and in America.

The combination of monofilament and parallel-fibrillated fibers interlock to significantly reduce infill flyout – a common complaint amongst athletes, coaches, and parents. The available two color configuration provides stunning aesthetics.

Sprinturf's GrandSlam Extreme™ and GrandSlam Extreme Green™ fields feature two unique polymer technologies. State of the art C8 monofilament resins from Dow and Nova are married to a proprietary metallacene slit film resin from Exxon. The combined product featuring the greatest polymer suppliers in the world provide unmatched durability with exceptional resilience, playability, and safety.

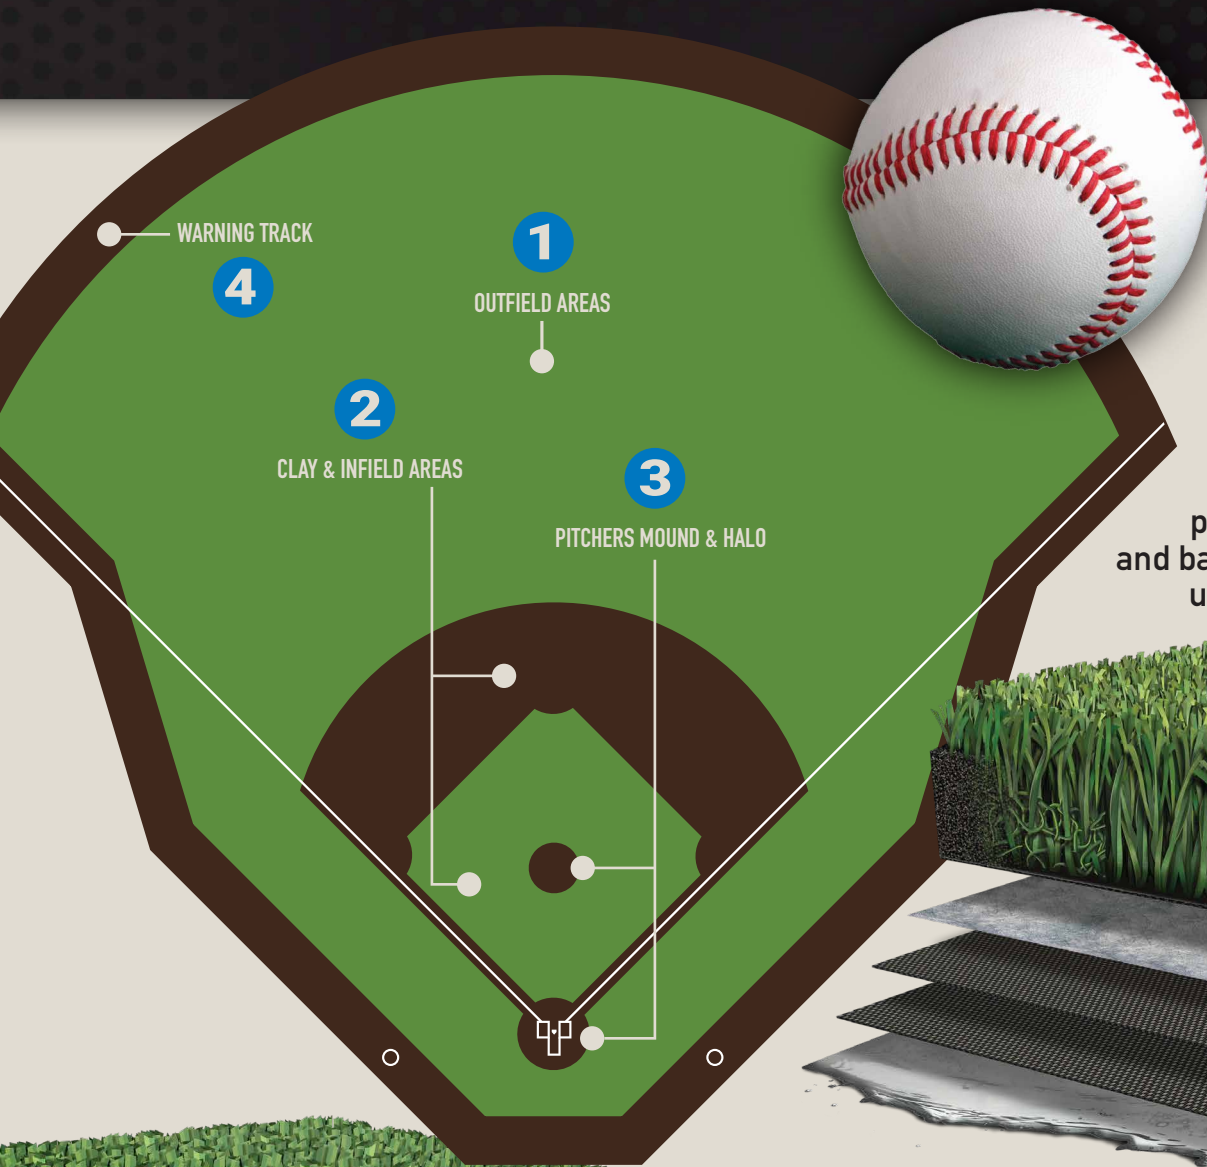

GrandSlam Extreme Green™ reduces temperature and creates the most natural ball interaction in the industry.

"We have had rave reviews on the look of the turf and more importantly, the playability of the surface. We have already had teams from 10 different states who have had their experience of playing on the surface and they all come back with the same response, "this is awesome". This project will help make this community much stronger and a better place to live. Our local kids are in Heaven playing on these fields."

Jack Roeder – GM of Prospect Meadows

predictable ball bounce
and ball roll while delivering
unparalleled aesthetics

GrandSlam Extreme Green™

Reduces surface temperature and creates
the most natural ball interaction in the industry

SPRINTURF® *GreenPlay® Organic Infill*

THE KEY COMPONENT IN OUR GRANDSLAM EXTREME GREEN™ TURF SYSTEM

GreenPlay® Organic Infill

Greenplay® is a second-generation, specially fortified, coconut fiber and cork infill designed to keep your GrandSlam Extreme Green™ field cool. Greenplay sole sources the raw materials from pesticide-free crops located near our production facility and utilizes a proprietary natural processing method to blend, package and ship in sealed bulk sacks to guaranty quality from the source to the field. Greenplay is a fully proven turf enhancing organic infill for durability and turf heat reduction, with over 60 installations in just the last 3 years. No organic infill has the record and performance that Greenplay has demonstrated.

Lower Temperatures

The plant-based infill absorbs moisture and slowly releases it back into the atmosphere in an evaporative cycle similar to natural grass.

Reduced Abrasion

The abrasiveness of a field is an important issue. Hard and abrasive infills are causing scrapes and burns that promote injury and infection. The abrasive index of natural grass is rated as 20 (ASTM F1505), Greenplay's average rating is 21.

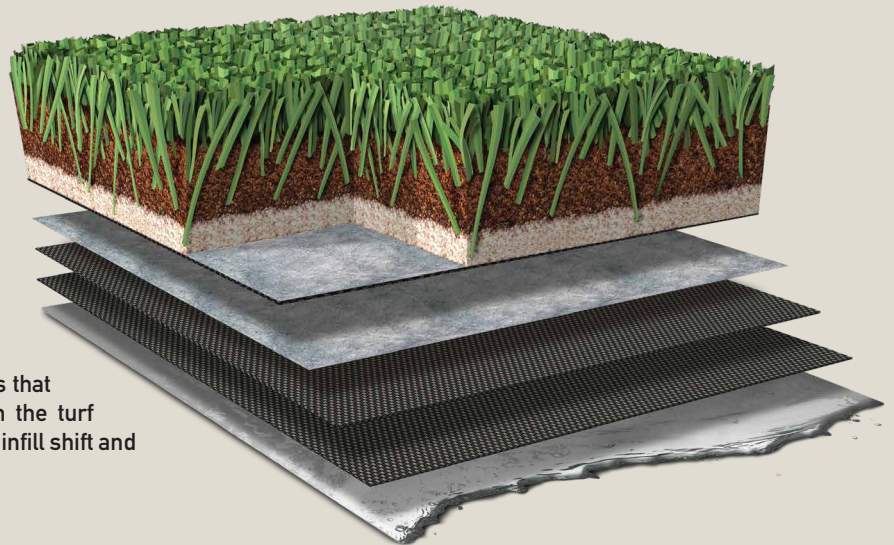

Increased Stability

Greenplay fortifies the blend with additional natural fibers that create a matrix which binds and stabilizes itself within the turf fibers. This matrix provides unmatched stability, reducing infill shift and particle fly-out.

Environment

Greenplay is pesticide-free, non-toxic and 100% recyclable in nature. Greenplay absorbs over 150% of its weight in moisture. The infill layer in a full-sized field can store approximately 30,000 gallons of water, which is excellent for storm water management.

Pitcher's Mound and Halo Color Configurations

Sprinturf offers a wide range of colors which gives you the flexibility to configure your pitcher's mound and halo to school colors or corporate branding standards. Your combinations can be subtle or bright and will remain vibrant for the life of your field.

1

Excavation of Existing Field

- Excavate sod & topsoil
- Remove any ancillary items

2

Subgrade Preparation

- Cut to subgrade
- Pipe drainage installation
- Line field with geotextile
- Potentially install a field drain / flat pipe

3

Finished Dynamic Stone

- Add base stone and finish stone
- Put in foul posts or other ancillary items

4

Installing the turf

- Roll out the 15' sections of turf
- Sew the panels together
- Install Inlays

5

Infill & Groom

- Add the sand and rubber or GreenPlay layers
- Groom the field thoroughly

6

Finished Product

- A completed field ready to play on

"When the City of Hobbs selected Sprinturf, we were told by other artificial turf vendors that there was no way that Sprinturf could deliver. The City of Hobbs can state unequivocally, that Sprinturf delivered a great product and project for us, completed on time and under budget."

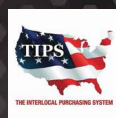

Doug McDaniel
